

SYMBOLIC DYNAMICS IN CHAOTIC SYSTEMS

Kai T. Hansen
Physics Department,
University of Oslo,
Box 1048, Blindern, N-0316 Oslo, Norway.
e-mail: k.hansen@fys.uio.no

Thesis presented for the degree Dr. Philos.
at the University of Oslo

September, 1993

Contents

I	One-dimensional maps	9
1	Unimodal map	11
1.1	Bifurcations in the unimodal map	11
1.1.1	Fixed point and period doubling	14
1.1.2	Unimodal map with complete grammar	20
1.1.3	The symbolic interval and the kneading sequence	21
1.1.4	Bifurcations and symbolic parameter space	22
1.1.5	Band merging bifurcations	23
1.1.6	Resonances	25
1.1.7	Resonances in the tent map	29
1.2	Construction of a finite automaton	30
1.3	Topological entropy	36
2	The n-modal map	41
2.1	Bimodal maps	44
2.1.1	Markov graphs	49
2.2	Trimodal maps	51
2.2.1	Fixed points	54
2.2.2	Period 2 orbits	55
2.2.3	Period 3 orbits	59
2.3	Higher n -modal maps	63
2.4	The $- + -$ bimodal map	65
II	Two dimensional maps	69
3	Two dimensional folding maps	71
3.1	The Smale horseshoe	72
3.1.1	Smale horseshoe with reflection	76
3.2	Variations of the Smale horseshoe	76

3.2.1	Once-folding maps	76
3.2.2	Twice-folding maps	80
4	Pruned horseshoes	87
4.1	Bifurcations	89
4.1.1	Stable and unstable manifolds at bifurcation points	89
4.1.2	One-dimensional approximation	92
4.2	Unimodal approximation	94
4.3	Bimodal approximation	94
4.3.1	Kneading values of short orbits	94
4.3.2	Period 5 orbits	102
4.3.3	Period 6 orbits	108
4.3.4	Longer periodic orbits	108
4.3.5	Generic bimodal swallowtails	111
4.3.6	Symbols of period doublings of swallowtails	114
4.3.7	Bimodal MSS ordering	114
4.3.8	The n -th return plot	116
4.3.9	The n -th map of the Lorenz model	119
4.4	Four unimodal maps approximation	122
4.4.1	Period 6 swallowtails	123
4.4.2	Period 4 orbit cusp bifurcation	128
4.4.3	Bifurcation of period 8 orbits	128
4.5	Biham-Wenzel method	138
4.6	Twice-folding maps	142
5	Pruning front for the Hénon map	147
5.1	Symbol plane	147
5.2	Primary turning points	148
5.2.1	Bifurcations of turning points	150
5.3	Pruning front	157
5.3.1	Period 5	158
5.3.2	4 modal approximation	162
5.3.3	Pruning front for $a = 1.0$, $b = 0.54$	163
5.4	Pruning front for the $ b = 1$ limit	164
5.5	Pruning fronts for the twice-folding map	166
5.6	Lozi map	167

III	Billiards	171
6	Symbolic dynamics of billiards	175
6.1	3-disk	176
6.2	4-disk	181
6.3	N-disk systems	182
6.3.1	Symbolic dynamics for N disks on a circle	182
6.3.2	N disks with a center disk	183
6.4	Wedge billiard, or Two Bouncing Balls	185
6.4.1	Wedge billiard	185
6.4.2	Two Bouncing Balls	186
6.4.3	Numerical simulations	189
6.4.4	Symbolic dynamics	191
6.5	Stadium Billiard	191
6.5.1	Phase space	193
6.5.2	Symbolic dynamics	193
6.5.3	Symbolic dynamics in the limit $a \rightarrow \infty$	202
7	Pruning in billiards	211
7.1	Singular points	211
7.2	3-disk	214
7.2.1	Pruning front	215
7.2.2	Overlapping disks	220
7.2.3	Approximating the pruning front	221
7.3	4-disk	229
7.4	Hyperbola billiard	231
7.5	6+1 Disk system	234
7.6	Stadium billiard	236
7.7	Wedge billiard	238
8	Symbolic dynamics in special limits	247
8.1	Wedge billiard	249
8.2	4-disk	253
8.3	3-disk	255
8.4	Mixed chaos-order systems in the Farey limit	259
9	Bifurcation in billiards	263
9.1	Tent map revisited	263
9.2	Dispersing billiards	265

9.2.1	The bifurcation family	266
9.2.2	The parameter space	269
9.3	Stadium billiard	270
9.4	Corner bifurcations	271
IV	Hamiltonian systems	273
10	Smooth Hamiltonian systems	275
10.1	Hamiltonian Hénon maps	276
10.2	The $(x^2y^2)^{1/a}$ potential	277
10.3	Parabola shaped potentials	282
10.3.1	NELSON	282
10.3.2	Størmer's problem	288
V	Quantum Chaos and Zeta Functions	293
11	Quantum Chaos	297
11.1	Semi-classical methods	297
11.2	Markov diagrams	300
12	Conclusions and new challenges	303
