## I Geometry of chaos 1

<b>1 Overture</b>	<b>3</b>
1.1 Why ChaosBook? . . . . .	4
1.2 Chaos ahead . . . . .	5
1.3 The future as in a mirror . . . . .	6
1.4 A game of pinball . . . . .	11
1.5 Chaos for cyclists . . . . .	15
1.6 Change in time . . . . .	21
1.7 To statistical mechanics . . . . .	23
1.8 Chaos: what is it good for? . . . . .	25
1.9 What is not in ChaosBook . . . . .	27
résumé 28 commentary 30 guide to exercises 33 exercises 34 references 34	
<b>2 Go with the flow</b>	<b>37</b>
2.1 Dynamical systems . . . . .	37
2.2 Flows . . . . .	42
2.3 Changing coordinates . . . . .	46
2.4 Life in extreme dimensions . . . . .	47
2.5 Computing trajectories . . . . .	52
résumé 52	
commentary 53	
2.6 Examples . . . . .	56
exercises 58 references 60	
<b>3 Discrete time dynamics</b>	<b>64</b>
3.1 Poincaré sections . . . . .	65
3.2 Computing a Poincaré section . . . . .	70
3.3 Mappings . . . . .	71
résumé 73 commentary 73	
3.4 Examples . . . . .	75
exercises 78 references 79	

<b>4 Local stability</b>	<b>81</b>
4.1 Flows transport neighborhoods . . . . .	81
4.2 Computing the Jacobian matrix . . . . .	84
4.3 A linear diversion . . . . .	85
4.4 Stability of flows . . . . .	87
4.5 Stability of maps . . . . .	88
4.6 Stability of Poincaré return maps . . . . .	88
4.7 Neighborhood volume . . . . .	90
résumé 91 commentary 92	
4.8 Examples . . . . .	93
exercises 99 references 100	
<b>5 Cycle stability</b>	<b>102</b>
5.1 Equilibria . . . . .	103
5.2 Periodic orbits . . . . .	103
5.3 Floquet multipliers are invariant . . . . .	107
5.4 Floquet multipliers are metric invariants . . . . .	109
5.5 Stability of Poincaré map cycles . . . . .	110
5.6 There goes the neighborhood . . . . .	111
résumé 111 commentary 112	
5.7 Examples . . . . .	113
exercises 114 references 114	
<b>6 Lyapunov exponents</b>	<b>115</b>
6.1 Stretch, strain and twirl . . . . .	115
6.2 Lyapunov exponents . . . . .	117
résumé 119 commentary 120	
6.3 Examples . . . . .	122
exercises 123 references 123	
<b>7 Fixed points</b>	<b>126</b>
7.1 One-dimensional maps . . . . .	127
7.2 Flows . . . . .	129
résumé 130 commentary 131	
7.3 Examples . . . . .	131
exercises 133 references 133	
<b>8 Hamiltonian dynamics</b>	<b>135</b>
8.1 Hamiltonian flows . . . . .	136
8.2 Symplectic group . . . . .	138
8.3 Stability of Hamiltonian flows . . . . .	139
8.4 Symplectic maps . . . . .	141
8.5 Poincaré invariants . . . . .	144
résumé 145 commentary 146 exercises 149 references 150	
<b>9 Billiards</b>	<b>152</b>
9.1 Billiard dynamics . . . . .	152
9.2 Stability of billiards . . . . .	154
résumé 156 commentary 157 exercises 157 references 158	

<b>10 Flips, slides and turns</b>	<b>161</b>
10.1 Discrete symmetries . . . . .	161
10.2 Subgroups, cosets, classes . . . . .	165
10.3 Orbits, quotient space . . . . .	167
résumé 169 commentary 170	
10.4 Examples . . . . .	171
exercises 173 references 173	
<b>11 World in a mirror</b>	<b>175</b>
11.1 Symmetries of solutions . . . . .	176
11.2 Relative periodic orbits . . . . .	178
11.3 Dynamics reduced to fundamental domain . . . . .	180
11.4 Invariant polynomials . . . . .	181
résumé 182 commentary 183	
11.5 Examples . . . . .	184
exercises 188 references 189	
<b>12 Relativity for cyclists</b>	<b>191</b>
12.1 Continuous symmetries . . . . .	192
12.2 Symmetries of solutions . . . . .	197
12.3 Stability . . . . .	201
résumé 202 commentary 203	
12.4 Examples . . . . .	204
exercises 209 references 209	
<b>13 Slice &amp; dice</b>	<b>212</b>
13.1 Only dead fish go with the flow: moving frames . . . . .	213
13.2 Symmetry reduction . . . . .	214
13.3 Bringing it all back home: method of slices . . . . .	214
13.4 Dynamics within a slice . . . . .	217
13.5 First Fourier mode slice . . . . .	219
13.6 Stability within a slice . . . . .	221
13.7 Method of images: Hilbert bases . . . . .	222
résumé 223 commentary 224	
13.8 Examples . . . . .	229
exercises 229 references 230	
<b>14 Charting the state space</b>	<b>236</b>
14.1 Qualitative dynamics . . . . .	237
14.2 Stretch and fold . . . . .	240
14.3 Temporal ordering: Itineraries . . . . .	243
14.4 Spatial ordering . . . . .	245
14.5 Kneading theory . . . . .	246
14.6 Symbolic dynamics, basic notions . . . . .	249
résumé 252 commentary 253	
14.7 Examples . . . . .	255
exercises 258 references 259	

<b>15 Stretch, fold, prune</b>	<b>262</b>
15.1 Goin' global: stable/unstable manifolds . . . . .	263
15.2 Horseshoes . . . . .	267
15.3 Symbol plane . . . . .	269
15.4 Prune danish . . . . .	272
15.5 Recoding, symmetries, tilings . . . . .	275
15.6 Charting the state space . . . . .	277
résumé 280 commentary 281	
15.7 Examples . . . . .	283
exercises 287 references 288	
<b>16 Fixed points, and how to get them</b>	<b>293</b>
16.1 Where are the cycles? . . . . .	294
16.2 Multipoint shooting method . . . . .	296
16.3 Cost function . . . . .	298
résumé 300 commentary 300	
16.4 Examples . . . . .	301
exercises 303 references 304	
<b>II Chaos rules</b>	<b>306</b>
<b>17 Walkabout: Transition graphs</b>	<b>308</b>
17.1 Matrix representations of topological dynamics . . . . .	308
17.2 Transition graphs: wander from node to node . . . . .	310
17.3 Transition graphs: stroll from link to link . . . . .	311
résumé 314 commentary 315	
17.4 Examples . . . . .	315
exercises 319 references 319	
<b>18 Counting</b>	<b>321</b>
18.1 How many ways to get there from here? . . . . .	322
18.2 Topological trace formula . . . . .	323
18.3 Determinant of a graph . . . . .	326
18.4 Topological zeta function . . . . .	328
18.5 Infinite partitions . . . . .	330
18.6 Shadowing . . . . .	331
18.7 Counting cycles . . . . .	333
résumé 334 commentary 336	
18.8 Examples . . . . .	337
exercises 342 references 345	
<b>19 Transporting densities</b>	<b>346</b>
19.1 Measures . . . . .	347
19.2 Perron-Frobenius operator . . . . .	348
19.3 Why not just leave it to a computer? . . . . .	350
19.4 Invariant measures . . . . .	352
19.5 Density evolution for infinitesimal times . . . . .	356
19.6 Liouville operator . . . . .	357

résumé 358	commentary 359
19.7 Examples . . . . .	360
exercises 361	references 363
<b>20 Averaging</b>	<b>365</b>
20.1 Dynamical averaging . . . . .	365
20.2 Moments, cumulants . . . . .	369
20.3 Evolution operators . . . . .	371
20.4 Averaging in open systems . . . . .	376
20.5 Evolution operator evaluation of Lyapunov exponents . . . . .	377
résumé 378	commentary 379
20.6 Examples . . . . .	379
exercises 381	references 382
<b>21 Trace formulas</b>	<b>384</b>
21.1 A trace formula for maps . . . . .	385
21.2 A trace formula for flows . . . . .	388
21.3 An asymptotic trace formula . . . . .	391
résumé 393	commentary 393
21.4 Examples . . . . .	394
exercises 395	references 395
<b>22 Spectral determinants</b>	<b>397</b>
22.1 Spectral determinants for maps . . . . .	397
22.2 Spectral determinant for flows . . . . .	398
22.3 Dynamical zeta functions . . . . .	400
22.4 False zeros . . . . .	403
22.5 Spectral determinants <i>vs.</i> dynamical zeta functions . . . . .	404
22.6 All too many eigenvalues? . . . . .	404
résumé 405	commentary 406
22.7 Examples . . . . .	407
exercises 410	references 411
<b>23 Cycle expansions</b>	<b>413</b>
23.1 Pseudo-cycles and shadowing . . . . .	414
23.2 Construction of cycle expansions . . . . .	416
23.3 Periodic orbit averaging . . . . .	421
23.4 Flow conservation sum rules . . . . .	422
23.5 Cycle formulas for dynamical averages . . . . .	423
23.6 Cycle expansions for finite alphabets . . . . .	426
23.7 Stability ordering of cycle expansions . . . . .	427
résumé 429	commentary 430
23.8 Examples . . . . .	434
exercises 435	references 436
<b>24 Deterministic diffusion</b>	<b>438</b>
24.1 Diffusion in periodic arrays . . . . .	439
24.2 Diffusion induced by chains of 1-dimensional maps . . . . .	443
24.3 Marginal stability and anomalous diffusion . . . . .	449

résumé 452	commentary 453	exercises 456	references 456
<b>25 Discrete symmetry factorization</b>		<b>458</b>	
25.1 Transformation of functions . . . . .		459	
25.2 Taking care of fundamentals . . . . .		460	
25.3 Dynamics in the fundamental domain . . . . .		463	
25.4 Discrete symmetry factorizations . . . . .		465	
25.5 $C_2 = D_1$ factorization . . . . .		469	
25.6 $D_3$ factorization: 3-disk game of pinball . . . . .		470	
résumé 472	commentary 473		
25.7 Examples . . . . .		474	
exercises 480	references 481		
<b>26 Continuous symmetry factorization</b>		<b>483</b>	
26.1 Compact groups . . . . .		484	
26.2 Continuous symmetries of dynamics . . . . .		488	
26.3 Symmetry reduced trace formula for flows . . . . .		490	
résumé 491	commentary 492		
26.4 Examples . . . . .		493	
exercises 496	references 496		
<b>III Chaos: what to do about it?</b>		<b>499</b>	
<b>27 Why cycle?</b>		<b>501</b>	
27.1 Escape rates . . . . .		501	
27.2 Natural measure in terms of periodic orbits . . . . .		503	
27.3 Correlation functions . . . . .		505	
27.4 Trace formulas vs. level sums . . . . .		506	
résumé 508	commentary 508	exercises 509	references 510
<b>28 Why does it work?</b>		<b>512</b>	
28.1 Linear maps: exact spectra . . . . .		513	
28.2 Evolution operator in a matrix representation . . . . .		517	
28.3 Classical Fredholm theory . . . . .		520	
28.4 Analyticity of spectral determinants . . . . .		522	
28.5 Hyperbolic maps . . . . .		526	
28.6 Physics of eigenvalues and eigenfunctions . . . . .		528	
28.7 Troubles ahead . . . . .		530	
résumé 531	commentary 533	exercises 535	references 535
<b>29 Intermittency</b>		<b>538</b>	
29.1 Intermittency everywhere . . . . .		539	
29.2 Intermittency for pedestrians . . . . .		541	
29.3 Intermittency for cyclists . . . . .		552	
29.4 BER zeta functions . . . . .		558	
résumé 561	commentary 561	exercises 563	references 564

<b>30 Turbulence?</b>	<b>566</b>
30.1 Configuration space: a fluttering flame front . . . . .	566
30.2 Constructing a state space . . . . .	569
30.3 Energy budget . . . . .	573
30.4 Infinite-dimensional flows: Numerics . . . . .	576
30.5 Visualization . . . . .	577
30.6 Equilibria of equilibria . . . . .	578
30.7 Why does a flame front flutter? . . . . .	580
30.8 Intrinsic parametrization . . . . .	582
résumé 582 commentary 583	
30.9 Examples . . . . .	584
exercises 587 references 588	
<b>31 Irrationally winding</b>	<b>591</b>
31.1 Mode locking . . . . .	592
31.2 Local theory: “Golden mean” renormalization . . . . .	597
31.3 Global theory: Thermodynamic averaging . . . . .	599
31.4 Hausdorff dimension of irrational windings . . . . .	600
31.5 Thermodynamics of Farey tree: Farey model . . . . .	602
résumé 604 commentary 604 exercises 607 references 608	
<b>IV The rest is noise</b>	<b>611</b>
<b>32 Noise</b>	<b>613</b>
32.1 Deterministic transport . . . . .	614
32.2 Brownian diffusion . . . . .	615
32.3 Noisy trajectories . . . . .	617
32.4 Noisy maps . . . . .	621
32.5 All nonlinear noise is local . . . . .	622
32.6 Weak noise: Hamiltonian formulation . . . . .	624
résumé 626 commentary 626 exercises 629 references 632	
<b>33 Relaxation for cyclists</b>	<b>636</b>
33.1 Fictitious time relaxation . . . . .	637
33.2 Discrete iteration relaxation method . . . . .	642
33.3 Least action method . . . . .	644
résumé 646 commentary 646 exercises 649 references 649	
<b>V Quantum chaos</b>	<b>652</b>
<b>34 Prologue</b>	<b>654</b>
34.1 Quantum pinball . . . . .	655
34.2 Quantization of helium . . . . .	657
commentary 658 references 659	

<b>35 Quantum mechanics</b>	
- the short short version	<b>660</b>
exercises 663	
<b>36 WKB quantization</b>	<b>664</b>
36.1 WKB ansatz . . . . .	664
36.2 Method of stationary phase . . . . .	667
36.3 WKB quantization . . . . .	667
36.4 Beyond the quadratic saddle point . . . . .	670
résumé 671 commentary 671 exercises 673 references 673	
<b>37 Semiclassical evolution</b>	<b>674</b>
37.1 Hamilton-Jacobi theory . . . . .	674
37.2 Semiclassical propagator . . . . .	682
37.3 Semiclassical Green's function . . . . .	685
résumé 690 commentary 691 exercises 693 references 694	
<b>38 Semiclassical quantization</b>	<b>695</b>
38.1 Trace formula . . . . .	695
38.2 Semiclassical spectral determinant . . . . .	700
38.3 One-dof systems . . . . .	701
38.4 Two-dof systems . . . . .	702
résumé 703 commentary 704 exercises 705 references 705	
<b>39 Quantum scattering</b>	<b>708</b>
39.1 Density of states . . . . .	708
39.2 Quantum mechanical scattering matrix . . . . .	712
39.3 Krein-Friedel-Lloyd formula . . . . .	713
39.4 Wigner time delay . . . . .	716
commentary 717 exercises 718 references 719	
<b>40 Chaotic multiscattering</b>	<b>722</b>
40.1 Quantum mechanical scattering matrix . . . . .	723
40.2 $N$ -scatterer spectral determinant . . . . .	726
40.3 Semiclassical 1-disk scattering . . . . .	730
40.4 From quantum cycle to semiclassical cycle . . . . .	736
40.5 Heisenberg uncertainty . . . . .	739
commentary 739 references 740	
<b>41 Helium atom</b>	<b>741</b>
41.1 Classical dynamics of collinear helium . . . . .	742
41.2 Chaos, symbolic dynamics and periodic orbits . . . . .	743
41.3 Local coordinates, Jacobian matrix . . . . .	747
41.4 Getting ready . . . . .	750
41.5 Semiclassical quantization of collinear helium . . . . .	750
résumé 756 commentary 757 exercises 759 references 760	

<b>42 Diffraction distraction</b>	<b>762</b>
42.1 Quantum eavesdropping . . . . .	762
42.2 An application . . . . .	768
résumé 772 commentary 773 exercises 774 references 775	
<b>Epilogue</b>	<b>777</b>
<b>Index</b>	<b>782</b>

**Volume www: Appendices on ChaosBook.org**

---

<b>VI Web Appendices</b>	<b>801</b>
<b>A1 A brief history of chaos</b>	<b>803</b>
A1.1 Chaos is born . . . . .	803
A1.2 Chaos grows up . . . . .	807
A1.3 Chaos with us . . . . .	808
A1.4 Periodic orbit theory . . . . .	810
A1.5 Dynamicist's vision of turbulence . . . . .	815
A1.6 Gruppenpest . . . . .	818
A1.7 Death of the Old Quantum Theory . . . . .	819
commentary 822 exercises 823 references 823	
<b>A2 Go straight</b>	<b>831</b>
A2.1 Rectification of flows . . . . .	831
A2.2 Collinear helium . . . . .	832
A2.3 Rectification of maps . . . . .	837
A2.4 Rectification of a periodic orbit . . . . .	838
résumé 839 commentary 840 exercises 840 references 841	
<b>A4 Linear stability</b>	<b>843</b>
A4.1 Linear algebra . . . . .	843
A4.2 Eigenvalues and eigenvectors . . . . .	845
A4.3 Eigenspectra: what to make out of them? . . . . .	853
A4.4 Stability of Hamiltonian flows . . . . .	854
A4.5 Monodromy matrix for Hamiltonian flows . . . . .	855
exercises 857	
<b>A6 Transport of vector fields</b>	<b>858</b>
A6.1 Evolution operator for Lyapunov exponents . . . . .	858
A6.2 Advection of vector fields by chaotic flows . . . . .	862
commentary 865 exercises 866 references 866	
<b>A7 Discrete symmetries of dynamics</b>	<b>868</b>
A7.1 Preliminaries and definitions . . . . .	868
A7.2 Invariants and reducibility . . . . .	874
A7.3 Lattice derivatives . . . . .	878
A7.4 Periodic lattices . . . . .	881
A7.5 Discrete Fourier transforms . . . . .	882
A7.6 $C_{4v}$ factorization . . . . .	886
A7.7 $C_{2v}$ factorization . . . . .	890
A7.8 Hénon map symmetries . . . . .	892
commentary 893 exercises 893 references 895	

<b>A14Symbolic dynamics techniques</b>	<b>897</b>
A14.1Topological zeta functions for infinite subshifts . . . . .	897
A14.2Prime factorization for dynamical itineraries . . . . .	904
<b>A16Finding cycles</b>	<b>908</b>
A16.1Newton-Raphson method . . . . .	908
A16.2Hybrid Newton-Raphson / relaxation method . . . . .	909
<b>A18Counting itineraries</b>	<b>911</b>
A18.1Counting curvatures . . . . .	911
exercises 912	
<b>A19Implementing evolution</b>	<b>913</b>
A19.1Koopmania . . . . .	913
A19.2Implementing evolution . . . . .	915
commentary 917 exercises 918 references 918	
<b>A20Convergence of spectral determinants</b>	<b>920</b>
A20.1Curvature expansions: geometric picture . . . . .	920
A20.2On importance of pruning . . . . .	923
A20.3Ma-the-matical caveats . . . . .	924
A20.4Estimate of the $n$ th cumulant . . . . .	925
A20.5Dirichlet series . . . . .	926
commentary 927	
<b>A37Noise/quantum corrections</b>	<b>928</b>
A37.1Periodic orbits as integrable systems . . . . .	928
A37.2The Birkhoff normal form . . . . .	931
A37.3Bohr-Sommerfeld quantization of periodic orbits . . . . .	933
A37.4Quantum calculation of $\hbar$ corrections . . . . .	934
references 940	
<b>A38Thermodynamic formalism</b>	<b>942</b>
A38.1Rényi entropies . . . . .	942
A38.2Fractal dimensions . . . . .	946
résumé 949 commentary 950 exercises 950 references 951	
<b>A39Statistical mechanics recycled</b>	<b>953</b>
A39.1The thermodynamic limit . . . . .	953
A39.2Ising models . . . . .	955
A39.3Fisher droplet model . . . . .	958
A39.4Scaling functions . . . . .	963
A39.5Geometrization . . . . .	966
résumé 973 commentary 973 exercises 973 references 974	
<b>A45Infinite dimensional operators</b>	<b>977</b>
A45.1Matrix-valued functions . . . . .	977
A45.2Operator norms . . . . .	979
A45.3Trace class and Hilbert-Schmidt class . . . . .	979
A45.4Determinants of trace class operators . . . . .	981

A45.5Von Koch matrices . . . . .	985
A45.6Regularization . . . . .	986
exercises 988 references 988	
<b>A46Projects</b>	<b>990</b>
A46.1Deterministic diffusion, zig-zag map . . . . .	992
references 996	
A46.2Deterministic diffusion, sawtooth map . . . . .	998

## Contributors

No man but a blockhead ever wrote except for money  
 —Samuel Johnson

This book is a result of collaborative labors of many people over a span of several decades. Coauthors of a chapter or a section are indicated in the byline to the chapter/section title. If you are referring to a specific coauthored section rather than the entire book, cite it as (for example):

C. Chandre, F.K. Diakonos and P. Schmelcher, section “Discrete cyclist relaxation method,” in P. Cvitanović, R. Artuso, R. Mainieri, G. Tanner and G. Vattay, *Chaos: Classical and Quantum* (Niels Bohr Institute, Copenhagen 2010); ChaosBook.org/version13.

Do not cite chapters by their numbers, as those change from version to version. Chapters without a byline are written by Predrag Cvitanović. Friends whose contributions and ideas were invaluable to us but have not contributed written text to this book, are credited in the acknowledgments.

4 Local stability .....	81
A2.1 Understanding flows .....	832
14.1 Temporal ordering: itineraries .....	237
Appendix A1: A brief history of chaos .....	803

### **Gábor Vattay**

### **Gregor Tanner**

29 Intermittency .....	538
Appendix A4.5: Jacobians of Hamiltonian flows .....	855

### **Arindam Basu**

Rössler flow figures, tables, cycles in chapters 14, 16 and exercise 7.1

### **Ofer Biham**

33.1 Cyclists relaxation method .....	637
---------------------------------------	-----

### **Daniel Borrero** Oct 23 2008, soluCycles.tex

Solution 16.1

**N. Burak Budanur**

13.5 First Fourier mode slice .....	219
13.6 Stability within a slice .....	219
Solution 12.5	
Solution 12.6	

**Cristel Chandre**

33.1 Cyclists relaxation method .....	637
33.2 Discrete cyclists relaxation methods .....	642

**Freddy Christiansen**

7.1 One-dimensional mappings .....	127
16.2 Multipoint shooting method .....	296

**Per Dahlqvist**

29 Intermittency .....	538
33.3 Orbit length extremization method for billiards .....	644

**Carl P. Dettmann**

23.7 Stability ordering of cycle expansions .....	427
---	-----

**Fotis K. Diakonos**

33.2 Discrete cyclists relaxation methods .....	642
---	-----

**G. Bard Ermentrout**

Exercise 5.1	
--------------	--

**Mitchell J. Feigenbaum**

Appendix A4.4: Symplectic invariance .....	854
--	-----

**Sarah Flynn**

solutions 3.5 and 3.6	
-----------------------	--

**Matjaž Gomilšek**

17.3 Transition graphs: stroll from link to link .....	311
--	-----

**Jonathan Halcrow**

Example 3.4: Sections of Lorenz flow .....	76
Example 4.6: Stability of Lorenz flow equilibria .....	96
Example 4.7: Lorenz flow: Global portrait .....	97
Example 11.5: Desymmetrization of Lorenz flow .....	185
Example 14.5: Lorenz flow: a 1-dimensional return map .....	255
Exercises 11.4 and figure 2.5	

**Kai T. Hansen**

14.3 Unimodal map symbolic dynamics .....	243
18.5 Topological zeta function for an infinite partition .....	330
14.5 Kneading theory .....	246
figures throughout the text	

**Rainer Klages**

Figure 24.5

**Yueheng Lan**

Solutions 1.1, 2.2, 2.3, 2.4, 2.5, 11.1, 15.7, 14.6, 19.1, 19.2, 19.3, 19.5,  
19.7, 19.10, 6.3 and figures 1.9, 11.1, 11.5 14.5,

**Bo Li**

Solutions 35.2, 35.1, 36.1

**Norman Lebovitz**

Example 15.2 A simple stable/unstable manifolds pair ..... 283

**Joachim Mathiesen**

6.2 Lyapunov exponents ..... 117  
Rössler flow figures, tables, cycles in sect. 6.2 and exercise 7.1

**Yamato Matsuoka**

Figure 15.4

**Radford Mitchell, Jr.**

Example 3.5

**Rytis Paškauskas**

4.6 Stability of Poincaré return maps ..... 88  
5.5 Stability of Poincaré map cycles ..... 110  
Exercises 2.8, 3.1, 4.4 and solution 4.1

**Adam Prügel-Bennet**

Solutions 1.2, 2.10, 9.1, 20.2, 23.2 28.3, 33.1.

**Lamberto Rondoni**

19 Transporting densities ..... 346  
16.1.1 Cycles from long time series ..... 294  
27.2.1 Unstable periodic orbits are dense ..... 504  
Table 18.2

**Juri Rolf**

Solution 28.3

**Per E. Rosenqvist**

exercises, figures throughout the text

**Hans Henrik Rugh**

28 Why does it work? ..... 512

**Luis Saldana**

solution 11.2

**Peter Schmelcher**

33.2 Discrete cyclists relaxation methods ..... 642

**Evangelos Siminos**
